CAG Members:

The U.S. EPA is hosting a media event Monday morning, October 31 to officially kick off the start of significant construction work associated with the Passaic River sediment removal project. The event starts promptly at 10:00 AM and should last no more than one hour. EPA Regional Administrator Judith Enck will lead a series of remarks from federal, state and local officials, and CAG co-chair Debbie Mans.

Participants will view the installation of metal sheet piling into the river bottom. Following the remarks, there is an optional visit to the site of the future sediment processing facility located at 117 Blanchard Street. There, participants can view the construction of buildings and infrastructure that will be used next year to process dredged sediment.

ACCESS TO THE SITES IS BY INVITATION ONLY. Please do not forward this invitation. Parking space is extremely limited. Please RSVP to me by reply email by close of business Thursday, October 27.

ATTIRE: Dress warmly. Wear shoes that are suitable for walking on rough terrain (large gravel), e.g., no open toe shoes or sandals or heels.

LOCATION: 120 Lister Avenue, Newark, New Jersey 07105, inside the fenced area of the Diamond Alkali site.
